

S NIKHIL

Bengaluru, Karnataka, India • Aspiring Software / Electronics Engineer

PROFILE

Motivated engineering student with hands-on experience in programming, electronics, embedded systems, and basic web deployment. Comfortable learning new technologies and building practical projects. Interested in software development, embedded systems, and technology-driven problem solving.

TECHNICAL SKILLS

Programming	C, Python
Web & Tools	HTML/CSS, GitHub, Vercel, basic web deployment
Embedded / Electronics	Arduino Nano, HC-05 Bluetooth, relay modules, solenoid locks, circuit fundamentals
Core Concepts	Data structures basics, memory allocation in C, problem solving, basic digital electronics

PROJECT EXPERIENCE

Smart Lock — Arduino-Based Security Prototype

- Developed a smart locking prototype using an Arduino Nano, HC-05 Bluetooth module, relay, and solenoid lock.
- Worked on the control flow, hardware integration, and Bluetooth-based access concept.
- Prepared project documentation covering aim, problem statement, methodology, components, results, advantages, and future scope.

Personal Web Project — GitHub & Vercel Deployment

- Worked with a web project and used GitHub for source-code management.
- Explored deployment through Vercel and troubleshooting of repository/deployment issues.

ACADEMIC / PRACTICAL EXPERIENCE

- Hands-on practice with C programming, including dynamic memory allocation using malloc, calloc, realloc, and free.
- Python programming practice involving lists, functions, and problem-solving exercises.
- Academic exposure to digital electronics topics such as multiplexers and ripple-carry adders.

STRENGTHS

Problem solving • Practical learning • Technical curiosity • Project development • Adaptability

CAREER INTERESTS

Software Development • Embedded Systems • IoT • Web Technologies • Electronics & Automation
